

Checkpoint 1: Dataset Setup

Objective

Verify the paired underwater dataset and define the supervised restoration task.

Key Message

The project has a clean paired dataset and a fixed split for fair training and testing.

Completed Work

- Verified 3672 matched clear/turbid image pairs.
- Created fixed train, validation, and test split files.
- Separated paired training data from unpaired qualitative data.

Evidence

Split	Pairs
Train	2937
Validation	367
Test	368

Notes

- Quantitative metrics are valid only on paired clear/turbid data.

Turbid underwater patch

Clear reference patch

Verified paired sample: filename 100.jpg

Example verified paired image patch.

Dataset pairing examples used during inspection.
