

Checkpoint 5: Full Results

Objective

Evaluate main models and ablations on the fixed 368-image test split.

Key Message

The complete result table uses the same test split for every quantitative claim.

Completed Work

- Evaluated 128x128 50-epoch baseline and residual models.
- Evaluated 100-epoch training variants.
- Evaluated 256x256 resolution variants.
- Generated final metric summary and plots.

Evidence

Experiment	PSNR	SSIM	Delta E
U-Net 128/50	15.681501	0.610758	29.645203
Matched U-Net 128/50	16.356273	0.746291	27.225774
Residual 128/50	16.304393	0.788963	26.840257
U-Net 128/100	15.976561	0.623376	28.571008
Residual 128/100	16.352538	0.785447	26.866293
U-Net 256/50	15.749889	0.609380	29.117468
Residual 256/50	15.900427	0.807967	27.078848

Notes

- Longer training helps the baseline but does not make it structurally stronger than the residual model.

Delta E comparison across experiments.
